

YASKAWA showcased its futuristic automation solutions at Intec 2019

YASKAWA is continuously focussed towards powering the best in class automation with its inventive and cutting edge technology. To demonstrate this, YASKAWA India in partnership with AXIS Global Automation showcased its equipment and technology at Intec 2019, CODISSIA Coimbatore from 6th to 10th June 2019 for the fourth consecutive time. With 2019 being the Golden Jubilee Year for CODISSIA, the event was redesigned and revamped to attract bigger footfall and more international audience in the segment of machine tools and automation.

To provide visitors with a glimpse of the capabilities of Yaskawa Robotic Solutions, live demonstration of Yaskawa product range was arranged at Axis Global Automation booth. Yaskawa MOTOMINI showcased pick and place application by serving juices to the visitors and acted as a centre of attraction to the gathering. Another live demo included AR1440 with X350 power source for welding application and GP 12 for pick and place application with vision handling automation. Simulation software MOTOSIM and MOTO COCKPIT were also presented during the show displaying the practicality of working robot, programming, software diagnosis, robot maintenance, life condition, etc.

In addition to this Yaskawa introduced the concept of I3-Mechatronics, a three-dimensional digital data solution. The detailed theory of integrated, intelligent and innovative solution was explained to the guests on how Yaskawa is empowering the next generation by synthesising its knowledge of mechatronics technology where industry is looking to work in future.

Being a major hub for manufacturing and education, Coimbatore is among the fastest growing Tier-II cities in India housing small, medium and large industries primarily in engineering segment. Yaskawa India with its business partner showcased its futuristic automation solutions targeting auto and non-auto OEMs, Tier1/ Tier2 and education segment. This year's exhibition was specifically focused on Automation and Industry 4.0 solutions and witnessed the footfall of approximately 3,00,000 visitors from industry and trade. ⚙️

YASKAWA Technology, Mehta CAD CAM drives the best-in-class automation solutions

With a constant futuristic approach, YASKAWA technology is driving the best in class automation solutions. This time Yaskawa India with its business partner Mehta CAD CAM showcased its array of powerful present day products at 8th IMTOS - India Machine Tools Show 2019, from 14th to 17th June, held at Pragati Maidan, New Delhi.

Key decision makers and influencers from industry visited IMTOS to cater the machine tool needs of production and automation. The exhibition also assured the participation from influential international networks in machine tools segment to serve the needs of visitors. YASKAWA India and Mehta CAD CAM came up together at IMTOS to serve

the customers at their best in a collaborated way promoting the system selling approach. The live demonstration of Yaskawa AR1440 robot with X350 power source showcasing the welding application attracted the huge gathering leading to good business potential. Both company's accurate product segmentation and highly efficient solutions facilitated the establishment of powerful, direct connections with matching business partners visiting the show.

Dynamic team present at the stall explained the visitors about the product features and futuristic technology of Yaskawa Robotics that would help industry in a big way in automation. Indeed this expo acted as a common platform for all to network with industry colleagues from around the globe involved in grasping the key market insights which would surely help businesses to expand themselves in the era of new industrial revolution Industry 4.0.

"Yaskawa products and services will always be there to support businesses of cutting and welding, pick and palletising, automation, machine tools, etc. in keeping their machines running and hence reducing their downtime. This would help industrial market to realise the best choice of robotic solutions for the applications they require and ultimately achieving their short and long-term goals" said excerpts. ⚙️
